Applications :

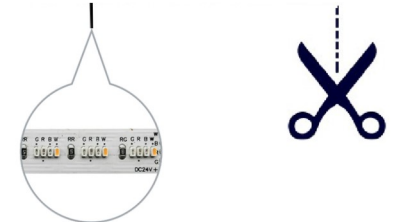

NTRGBW-192 linear source consists of a high efficiency LED flexible tape which allows you to realize specific projects where you need a multi-colors and white light source (RGBW 1 chip each color).

- Gives a programmable and multicolors dimmable light source for reception spaces, hallways and event rooms.
- Create a design or an ambiance with a colored light source
- Illuminate and/or tint surfaces like: walls, ceiling, recess, mural and statues. Allows the enhancement of architectural textures/reliefs.
- Colored lighting enhancement for wooden project, shelf and display.

The **NTRGBW-192** must absolutely be installed on a surface that allows heat dissipation or it must be inserted in one of our many LEDBAR aluminum profiles available to allow heat transfer and thermal management.

Do not apply directly on wood, plexiglas or other types of plastics and glass surfaces. This product must be applied on a surface where heat and temperature can create constraint.

Consult our technical specs sheets to select one of our LEDBAR architectural linear profile.

Characteristics :

- 384 light emitting diode per meter
- 15.36 Watts per meter / Voltage 24VDC standard.
5 meters maximum length per 24V circuit
- 120° degrees beam
- 50,000 hours of longevity.
- **IP22** standard
- **Working temperature:**
Min -40°C/+50°C Max.

Linear source dimension :

- 10 mm (0.39") width X 2mm (0.08") height
- IP67 version 13mm (0.51") width
- Length : 5 meters (16.4') per roll
- Adhesive : 3M tape in back
- Cut : possibility to cut the tape every 62.5mm (24 LED) 24 VDC

Options :

- **IP67** with a silicone envelope version (WP)

Ordering Matrix / Specification

Model	Strip	Color	Volts
NTRGBW			
	192 192 WP	Red, green, blue and white * 3000K standard Lumens : 343 lumens per meter	24 VDC

The strip must be connected to a low voltage output power supply according to selected voltage and power criteria WP indicates a weatherproof strip inside a flexible silicone sleeve.
